

En utilisant l'exemple ci-contre, recopier et compléter les égalités de fractions proposées.

Exemple :

$$\begin{aligned} \frac{8}{13} &= \frac{8 \times 2}{26} \\ &= \frac{16}{26} \end{aligned}$$

$$\frac{5}{10} = \frac{\dots}{70} = \dots\dots\dots$$

$$\frac{16}{15} = \frac{\dots}{135} = \dots\dots\dots$$

$$\frac{19}{17} = \frac{\dots}{119} = \dots\dots\dots$$

$$\frac{3}{12} = \frac{\dots}{108} = \dots\dots\dots$$

$$\frac{20}{9} = \frac{\dots}{27} = \dots\dots\dots$$

$$\frac{10}{4} = \frac{\dots}{8} = \dots\dots\dots$$

$$\frac{8}{6} = \frac{\dots}{12} = \dots\dots\dots$$

$$\frac{13}{14} = \frac{\dots}{98} = \dots\dots\dots$$

$$\frac{13}{4} = \frac{\dots}{20} = \dots\dots\dots$$

$$\frac{19}{15} = \frac{\dots}{60} = \dots\dots\dots$$

$$\frac{14}{15} = \frac{\dots}{75} = \dots\dots\dots$$

$$\frac{10}{3} = \frac{\dots}{12} = \dots\dots\dots$$

$$\frac{20}{14} = \frac{\dots}{98} = \dots\dots\dots$$

$$\frac{1}{6} = \frac{\dots}{54} = \dots\dots\dots$$

$$\frac{18}{13} = \frac{\dots}{65} = \dots\dots\dots$$

$$\frac{9}{10} = \frac{\dots}{80} = \dots\dots\dots$$
